# JUMP START

## SOIL CONDITIONER

### Improves Soil Structure

Jump Start Soil Conditioner restores soils to healthy and fertile conditions. The presence of soil amendments such as humic, fulvic and ulmic acids break up compacted soils. The tremendous benefit is soil that is easier to work or till and it has increased aeration thus allowing the plant roots to grow bigger and stronger.

### Increases water holding capacity

Jump Start works hard to rebuild the organic content of your soil. This makes your soil better able to hold moisture, thus reducing the amount of water needed. This along with proper watering techniques (less often but longer) allows the water to go deep into your soil and your lawn's roots will grow deeper to take it in. This also helps resist drought conditions.

### Increases Uptake of Soil Nutrients

Jump Start Soil Conditioner is a great soil activator because it is high in humic acid. Humic acid is not a single acid but a complex mixture of many different acids. It is produced by biodegradation of dead organic matter. Humic acids stimulate plant and root growth by increasing the plant ability to uptake and receive nutrients. Jump Start Soil Conditioner is especially beneficial in freeing up nutrients in the soil so that they are made available to the plant as needed.

Jump Start further functions as a soil activator by stimulating root and plant growth thereby increasing crop yields, seed germination, and overall plant vitality. Plants will also benefit from an increase in nitrogen uptake. This means that fertilizers will be much more effective.

### Helps Fight Disease

Jump Start Soil Conditioner helps fight diseases and improves root systems while requiring less fertilizer. University studies show that using humates and organic soil amendments when planting new trees and shrubs will help them adapt to their new environment and provide much greater first year growth.

Extremely High Fixed Carbon

Loaded with Biology

Stimulates Root Growth

Chelates Soil Nutrients

11%

Total Humic Acid

7%

Fulvic Acid
